

INNOVATIVE SOUND SOLUTION

What if everyone in your audience could hear crystal clear sound, without muddy vocal distortions or reverberations?

**IT'S NOT A
SPEAKER.
IT'S THE
SoundPanel**

We've all experienced it. We attend a seminar or venue where the sound is so muddled and muffled that half the audience can hardly understand the lecture. This problem is so common we have become used to it. **Now there is a solution for venues with problematic acoustics!**

"With the poor acoustics in that auditorium, I thought we might just have to deal with the reverberation noise forever. When I walked into the room and heard the music coming from the SoundPanels, I was stunned. I knew right there that this was one of the most exceptional sound systems I'd ever heard." Tom Nelson.

The SoundPanel:

- *Significantly reduces reverberations and other common distortions.*
- *Spreads sound evenly across a venue, eliminates dead spots. Puts clear sound to the back of the room without blasting the audience in front.*
- *Improves clarity and speech intelligibility issues that plague venues.*
- *Eliminates common "muddy voice" problems.*
- *Add graphics to blend with your décor.*

For houses of worship, auditoriums and educational settings, the crisp clarity of vocals will give your audience crystal clear sound. *Get rid of your "muddy voice" problems!*

The **SoundPanel**'s omnidirectional characteristics spread sound evenly across the entire listening environment, not just directly in front of the loudspeaker. The acoustics of even the most challenging venues can be dramatically improved with the **SoundPanel**. You've experienced venues with acoustic problems that are nearly impossible to fix with conventional loudspeakers or equalization.

Now get startling clarity with the **SoundPanel**.

Can your old speaker look like this?

- **Light weight** – perfect for portable applications. Tired of lifting 45 pounds of speaker onto a stand? At 7.9 pounds, the **SoundPanel** makes set-up, take-down and portability much easier for one person.
- **Size** – don't waste precious floor space on bulky speakers. The **SoundPanel** hangs on a wall like a poster, 26 inches high by 21½ inches wide.
- **Mounting** – mounts easily on a standard microphone stand (a 3-legged stand is recommended). Also mounts easily on a wall, inconspicuously out of the way.
- **High efficiency** – the **SoundPanel** uses a fraction of the power of conventional loudspeakers.

Perfect for installations in small- to medium-size venues that need crystal clear sound across the room. For conferences rooms, reception halls, schools, A/V, trade shows, acoustic bands, karaoke or DJs. Also auditoriums, churches, bars, lounges and halls, anywhere crystal-clear sound is required with minimal profile. Attach graphics. Now available in hardwood frame, the **SoundPanel** disappears into your décor!

*The **SoundPanel** is the audio solution for your venue.*

Specifications

- Type: Distributed Mode Loudspeaker
- Operating Range: 60Hz – 21KHz (with no crossover network)
- Sensitivity: 1W/1M 89dB
- Max. input rating: 80 Watts (AES)
- Max. output rating: continuous 108dB
- Max output rating: peak 114dB
- Nominal impedance: 8 ohms
- Transducers: 4 High efficiency radial magnets
- Input connector: 1 X NL4 Speakon
- Dimensions: 26 inches by 21½ inches by 3 inches thick. Frame is 1½ inches thick.
- Weight: 7.9 lbs., shipping weight 11 lbs.
- Comes with mounting tube for mic. stand.

Accessories

- Hard carry case protects 2 speakers (available with or without wheels)
- Wall/ceiling mounting bracket.
- **NEW! Now available with custom-stained hardwood frame.**
